WHY
ARE
WE
HERE

BARMM leads regions in fish production

258,981

metric tons of fish
and sea harvest

PROBLEM # 1

period, 4.8% for brackishwater ponds, 1.5% for freshwater pens, 1.3% for freshwater cages, and 1.1% for freshwater ponds. Brackishwater ponds throughout the country, freshwater ponds in Mindanao, and marine coastal water cages are seen to have a high potential for growth. From focus group discussions and key informant interviews with 55 tilapia farmers in Luzon and Mindanao, the major causes for the low production of farmed tilapia identified were "High Water Temperature" (68%), "Lack of Government Assistance" (58%), "Poor Breed of Tilapia" (48%), "High Cost of Production" (46%) and "Lack of Capital" (44%). Measures are recommended for addressing the major causes of low production.
